Frequently Asked Questions

TRANSPARENT CLIENT ADVISORY

"Common questions about software, automation and digital solutions."

TOPICS COVERED IN THIS FAQ SHEET

- **Scope & Solutions** Q1-Q4: Custom applications, business workflows, ERP & CRM capabilities
- **AI & Integrations** Q5-Q7: Practical AI, 3rd-party REST APIs & responsive mobile engineering
- **Infrastructure & Ops** Q8-Q10: Cloud deployment, hosting, post-launch support & project kickoff
- **Data & Security** Q11-Q12: Data migration, legacy CSV/Excel import & access controls
- **Internal Systems** Q13-Q14: Internal operations software & post-launch feature evolution

**SERVICES & CORE CAPABILITIES**

Core Software Solutions, Workflows & AI

1 What type of software does Jyot Enterprise develop?

Jyot Enterprise develops business-focused software solutions including custom web applications, management systems, ERP/CRM solutions, automation platforms, dashboards, APIs and workflow-based applications.

2 Can software be built around our existing business workflow?

Yes. The existing workflow can be studied first and the solution can then be designed around the business process, users and operational requirements.

3 Do you provide ERP solutions?

Yes. ERP-style solutions can be designed or customized around business requirements such as manufacturing, inventory, purchasing, sales, reporting and other operational workflows.

4 Can you develop CRM software?

Yes. CRM solutions can include lead management, customer management, sales pipelines, follow-ups, tasks, appointments and reporting.

5 Can AI be integrated into existing software?

Yes. AI capabilities can be integrated where they provide practical business value. Possible use cases include AI assistants, document processing, workflow automation, data processing and LLM-based features.

**TECHNICAL ARCHITECTURE & PROCESS**

APIs, Responsiveness, Hosting & Kickoff

6 Can you integrate third-party APIs?

Yes. APIs can be integrated based on the technical capabilities, documentation and requirements of the third-party service.

7 Will the software work on mobile devices?

Web applications can be designed responsively for mobile, tablet and desktop environments.

8 Do you provide deployment and hosting support?

Deployment and infrastructure requirements can be discussed based on the project's architecture, hosting environment and business needs.

9 Do you provide post-launch support?

Yes. Depending on the engagement, support can include maintenance, bug fixes, technical improvements and future enhancements.

10 How does a project start?

The process starts with a consultation to understand the business requirement, existing workflow, users and expected outcome. A suitable technology approach can then be discussed.

**SECURITY, EVOLUTION & ENGAGEMENT**

Data Migration, Security, Evolution & Contact

11 Can existing data be migrated into a new system?

Existing data such as spreadsheets, CSV files or databases may be migrated depending on the data structure, quality and project requirements.

12 How do you approach software security?

Security considerations can include authentication, authorization, protected data access, server-side operations, input validation and appropriate database access controls.

13 Can you build internal business management software?

Yes. Internal systems can be designed for workflows such as employees, tasks, leads, customers, documents, approvals, reporting and other business operations.

14 Can software be enhanced after launch?

Yes. Business software can evolve over time with additional features, workflow improvements, integrations and performance enhancements.

STILL HAVE A QUESTION?**Let's discuss your requirement.**
