IT Services Capability Brochure

PRACTICAL ENGINEERING PHILOSOPHY

"Technology solutions designed around the way your business works."

CORE PRACTICE AREAS INCLUDED IN THIS BROCHURE

■ Custom Software

Bespoke business platforms & tailored web portals

■ ERP Solutions

Manufacturing, inventory, purchasing & sales workflows

■ CRM & Pipelines

Automated lead ingestion, booking & team routing

■ AI & Automation

Applied LLMs, document extraction & workflow copilots

■ Cloud & Integrations

PostgreSQL, Supabase, REST APIs & cloud infrastructure

ABOUT JYOT ENTERPRISE

Technology That Supports Business Growth

Jyot Enterprise provides practical technology solutions for businesses looking to digitize operations, automate repetitive processes and build better systems for managing customers, teams and business workflows.

We focus on understanding the business process first and then designing technology around the actual operational requirement.

Our solutions can combine custom software, ERP, CRM, AI automation, cloud infrastructure and API integrations into a connected digital environment.

OUR OPERATIONAL COMMITMENTS

01 Process-First Engineering

We analyze operational bottlenecks and daily workflows with key stakeholders before architecting schemas or selecting technology stacks.

02 Connected Digital Systems

We prevent data silos by connecting ERP, CRM, client portals, and external APIs into a clean, centralized database environment.

03 Practical Operational Value

We engineer software that staff can actually use effortlessly — emphasizing intuitive usability, responsive design, and rapid response times.

THE CONNECTED DIGITAL ENVIRONMENT ARCHITECTURE

- **Operational Inputs:** Customer leads, inquiries, orders, staff actions & legacy records
- **Connected Core:** Unified PostgreSQL database with custom web apps, Jyot ERP & CRM
- **Intelligent Layers:** Automated routing, status alerts, document parsing & API synchronizations
- **Business Outcomes:** Zero redundant data entry, instant executive reporting & audit clarity

CORE SERVICES

Our Technology Solutions

Five dedicated technology disciplines structured around mid-market and enterprise requirements.

1 Custom Software & Product Engineering

Build tailored web applications, business platforms, portals and workflow-driven software around specific business requirements.

Business applications Web platforms Customer portals Internal management systems
API development Workflow automation

2 Jyot ERP — Business Operations

Business-focused ERP solutions designed to organize and digitize operational workflows.

Manufacturing workflows Inventory tracking Purchasing & vendor POs Sales orders & dispatch
Business reporting Multi-branch operations Accounting / GST integrations

3 Jyot CRM & Lead Automation

Solutions for managing leads, customers and sales workflows from one place.

Lead management & capture Customer 360 records Sales pipeline tracking Follow-up scheduling
Team task boards Appointment & booking flows Lead routing & assignments Communication history

4 AI & Intelligent Automation

Use AI and automation to reduce repetitive work and improve operational efficiency.

Custom AI assistants LLM integrations Document processing & OCR Workflow automation triggers
Automated data processing AI-powered business flows

5 Cloud, DevOps & API Integration

Technology infrastructure and integration solutions for modern applications.

Cloud deployment & hosting 3rd-party API integration Database architecture
Authentication & security Deployment automation Application monitoring
Scheduled backup planning

DELIVERY APPROACH

Our Delivery Approach

An 8-stage structured delivery model ensuring complete transparency, quality and alignment.

01 Discovery

Understand business goals, users and existing workflows through stakeholder interviews and process mapping.

02 Planning

Define features, database architecture, API integrations, milestones and realistic delivery scope.

03 Design

Create clear, responsive user experiences, interactive prototypes and consistent interface systems.

04 Development

Build the application, database schemas, REST APIs and business logic with clean, modular code.

05 Testing

Validate functionality, security, responsiveness, edge cases and reliability across devices.

06 UAT

Client team reviews the solution on live staging environments and provides feedback before sign-off.

07 Deployment

Move the approved solution into production with database migration, SSL setup and operational checks.

08 Support

Continue with proactive maintenance, issue fixes, security patching and future feature enhancements.

COLLABORATIVE & MILESTONE-DRIVEN DELIVERY

- Transparent sprint tracking: Regular review meetings and live demo builds keep you in control.
- Formal UAT sign-off matrix: Clear milestone acceptance criteria before initiating production rollout.
- Handover & documentation: Full code repository access, schema dictionaries and operational manuals provided.

VALUE PROPOSITION

Why Businesses Choose a Practical Technology Approach

We prioritize pragmatic business outcomes, long-term reliability and straightforward communication.

■ Business-first thinking

We focus on the business problem before selecting the technology. Software is an investment that must reduce manual work, lower error rates or drive tangible operational growth.

■ Custom workflows

Solutions can be designed around existing operational processes instead of forcing your team to contort into rigid, uncustomizable commercial SaaS platforms.

■ Scalable architecture

Systems can be structured to support future growth. Clean modular codebases and industry-standard relational schemas ensure smooth expansion over time.

■ Security-conscious development

Authentication, authorization and protected data access are considered during implementation. Role-based permissions protect sensitive business data.

■ Automation mindset

We identify repetitive workflows that can be improved through automation, freeing up your internal team to focus on higher-value client and business priorities.

■ Long-term support

Technology should continue evolving with the business. We provide dedicated support agreements covering updates, monitoring and continuous improvements.

"Technology should adapt to your business, not force your business to adapt to rigid off-the-shelf software."

— Jyot Enterprise Core Engineering Principle

STANDARDS & STACK

Technology & Engineering Standards

Built exclusively on battle-tested, open technologies actually deployed and supported across our client engagements.

Frontend Architecture

React

TypeScript

TanStack Start

Tailwind CSS

Component-driven, responsive user interfaces with strict type-safety, accessible navigation and rapid rendering across mobile and desktop devices.

Backend Services & Business Logic

Python

Flask / FastAPI

Node.js (where applicable)

Modular API backends, RESTful endpoints, background workers and clean request-response pipelines tailored to specific operational throughput.

Database & Data Solutions

PostgreSQL

Supabase

MySQL (where applicable)

Relational data modeling, ACID compliance, structured migrations, indexed query performance and clean relational integrity across business entities.

Infrastructure & Engineering Workflow

Cloud Deployment

REST APIs

Git / GitHub

CI/CD (where applicable)

Version-controlled development repositories, isolated staging environments, automated build checks and disciplined production release procedures.

CLIENT INTELLECTUAL PROPERTY & CODE OWNERSHIP

- Full Source Code Transfer: Upon milestone settlement, you own 100% of bespoke code, database structures and designs.
- No Proprietary Vendor Lock-in: Built using industry-standard open tools so your internal team can manage it anytime.
- Hosting Independence: Deployed directly on your own infrastructure account with full administrative ownership.
